

Luis G. Bravo Anato

Cover letter

I'm a venezuelan software engineer currently living in Athlone, Ireland. I got my computer engineering degree back in 2007.

About my current role

In Ericsson, I am lead developer in the UI SDK team and responsible for the presentation subsystem within the Ericsson Network Manager (ENM) project. The UI SDK team consists of libraries and components that are used for developing web frontend applications globally in the whole organization. As a UI specialist my role is to develop new functionality and maintain the different components in the SDK. In addition, a very important aspect of the work is to guide other developers to make sure they follow best practices and design patterns.

About my background

I have extensive web frontend experience, HTML, CSS and Javascript frameworks such as ReactJS, Angular, Backbone, knockout and also with native js, developing an Ericsson specific Framework. Although, recently I have been working as a UI specialist I have a full stack background.

As far as my node.js knowledge, I've started developing in node about 3 years ago when I started using express.js, sequelize.js, orm2, mongoose to learn and develop my own projects, then when I began working in Safertaxi.

I have experience with PHP frameworks like zend framework, Laravel and cakePHP. I am a Zend certified engineer PHP 5.3 License ZEND022332. I have worked with databases such as Mysql, Postgresql and MSSQL.

I am a hardworking person that loves challenges, solving problems and most of all I am a quick learner. Finally, it is fair to say that I have excited expectations in every role I have taken and I am confident that I would be an great asset to any organization.

For more information you can visit my website, in there you can find a portfolio section showing some of my personal projects, work and sample code.
